RAVER **ARMORED READY** SHAFT

FOR DRIVER

A combo of unique whip and powerful whip return delivers a super shot. Full-length camouflage shaft.

In general, most shafts aiming for excellence in flight distance are designed with a smaller swing width. This is because a shaft with a wider whip will not provide a quick clubhead return, thus losing the feel of the shot. Raver Armored Ready provides not only a big whip but also an accurate and swift whip return. As your hands feel the whip during the down swing, you will create well balanced timing and swing tempo. At the same time, you will feel a sharp whip return from the midpoint of the downswing, striking the ball with bracing follow-through and a solid shooting feel The invigorating and powerful whip return builds up your shot distance, helping you improve contact rates. It also properly controls the spin rate of a shot ball, producing a powerful trajectory. This ability to control spin rates allows the club to minimize the curve width of any miss-shot upon ball release. Raver Armored Ready with excellent carry performance allows impacting at high meeting rate. It will be a reliable part of any amateur golfer’s arsenal.

RAVER **ARMORED READY** SHAFT

FOR FAIRWAY WOOD

FW-specs to deliver sharp whip return and refreshing swing.

Fairway Wood Shaft following the shaft performance of drivers, Raver Armored Ready, and IMPACT BORON. Its stiffness characteristics allow you to release a ball vigorously in any lie condition. Unlike a driver shaft, it helps you properly focus on the sweet spot. It is available in three color options. Choose one and deliver extended carry through the sky.

FOR UTILITY

Deliver long flight, good capture, and easiness. Utility-spec Shaft.

Support a broad range of needs from average hitters to hard hitters. It is finished with exquisite weight balance to incorporate complete and effective utility function. This is a new generation Utility Shaft that has magnificently achieved two elements - inherent flight distance and high operability. Even a golfer who prefers slower head speed can easily swing this shaft, balance the timing, and transmit strength completely to the ball.

IMPACT BORON

Excellent quality shaft that helps extend your shot distance and improve your swinging technique.

Full Length Boron, a material used for IMPACT BORON, excels in strength, stiffness and elasticity, and is used in the manufacture of movable vanes of aircrafts and racing cars, as well. Its super “whip return” during swinging, demonstrates a tendency for quality and stability, ensuring excellent flights and better pinpointed trajectories. Its flexibility provides an impressive whip motion even at a slower swing speed, allowing the shaft to accumulate power and promptly return to the original position, accelerating the shaft’s power in the impact zone. This also means that you can reduce swing delays, and improve head speed and meeting rate for better flight distances. If you miss the sweet spot, this shaft will prevent you from losing follow-through, minimizing the loss of flight distance. IMPACT BORON delivers strong whip return, smooth follow-through, and enhanced swing.

IMPACT BORON IMPRESSION

Taichiro Kanaya Pro-Golfer's impression of Impact Boron

Through test use of this shaft, I have found that it responds well to the player’s intention, while providing lash-like flexibility.

This impressive flexible return must be specific to boron. It behaves as if it had neurons from the grip to the end of the shaft. I feel so comfortable with this shaft since it moves as I expect it should. This process occurs in several tenths of a second, so in a slow motion picture you will see the shaft assisting the player according to his individual swinging rhythm. This enables the player to make impact with precisely the right timing. This shaft is easy to swing, bending entirely like a lash, and still correctly calibrates the appropriate direction.

VENUS

Full Boron Shaft in super light-weight type (40-gram shafts)
Easy to extend shot distance.

As part of our IMPACT BORON series, VENUS is a particularly lightweight shaft leveraging Full Boron. VENUS is designed to provide better flexibility and manageability for physically less powerful players wishing to improve flight distance. Delays in swinging can be prevented by the boron effect that is a sharp flexible return during down swing after a big whip from the top of the backswing arc. Its artwork, through graphics and color scheme, is inspired by the vintage look of the 1960s.

Shocking Blue

Purple

Gold

VENUS Price: JPY48,000 (excl. tax)
Shaft Colors: Shocking Blue, Purple, and Gold

You can zero-in-on your target with this super high impact shaft.

It provides strong whip return with superb impact. Experience the feel of jaw-dropping flight distance.

The developmental concept behind Impact Boron Revolver is to create “40-gram shafts acceptable even to male pro-golfers”. Light and flexible, this shaft efficiently conducts strength at impact, enabling a golfer to achieve his/her best possible capacity. It has, therefore, been attracting a wide variety of users from seniors to driving contest players.

Needless to say, It is also popular among a number of professional golfers. One of the features of Revolver Shaft is its super flexibility that allows a big whip return, specifically allowing for high reproducibility and excellent shaping beyond typical expectations. This will definitely help you improve the initial speed of your ball. Although it depends on the individual, the shaft will surely assist you in improving your speed by 1 - 2m/s, and extending your shot distance.

Hyb Hybrid out-drives (Fairway Wood

A new model - IMPACT BORON REVOLVER FU is a shaft of hybrid construction.

Typically, a Utility/Hybrid Club is considered even by pros to be a must for its ability to lift a ball higher than an iron club and its shorter shaft making it easier to swing than a fairway wood. The model FU was developed out of a specific desire - to provide a greater carry distance than a fairway wood.

Just like Revolver, FU lets you realize high performance the moment you start swinging it. The moment the shaft flexes most, the club head is propelled through the forward swing position, further increasing speed in order to maximize impact.

Furthermore, this shaft gives an unexpectedly long flight distance for a hybrid type. Once equipped with IMPACT BORON REVOLVER FU, even a fairway wood that has proven difficult in pinpointing an accurate trajectory can turn into a well-balanced hybrid that easily allows for out-driving opponents.
